

Safe Compactible Play Structure

Abstract

A child's play ramp, of flexible sheet material, leading up to a play room. Ramp is for climbing and sliding. The playroom is open to the ramp, but part of that opening is covered by a screen. Barriers prevent dangerous falls in directions other than down the ramp. A safety mat is included at ramp bottom. The product is compactible into the form of a box. There is: a specific foothold construction; a specific way of lining side fall barriers; and a specific method of attaching a safety mat to the low end of the ramp.
